What's wrong with me!

Isn't that the question you keep asking yourself? You've been to *how many* doctors and specialist to figure this out and how does it always seem to turn out...more of the same old "let's try this and see if it works" or "I'm going to send you to get another test." Sound familiar?

After all you've been through, all the tests, time and money, how much progress have you really made? Are you any closer to getting what you want in regards to your health, or answers to any of your questions for that matter?

Hi, my name is Dr. Shane Smith and I'd like to help you put a stop to all the guessing and the uncertainty that comes with it. I've been helping people in Chico find the ROOT of they're problems and clearing up the "mystery" behind they're disorders.

You see, many doctors today base they're care on your symptoms. Here's the basic scenario: If you have a headache, take some aspirin; if you have insomnia, take these sleeping pills; oh you are dizzy, here take some meclizine; if you have fibromyalgia/chronic pain, take these pain killers. And what if these pills don't work? Well let's give you more of those and some new ones too! What? That's not working, let's put you on some antidepressants and send you to a psychologist because the pain *must* be in your head. No help there huh? Looks like we're going to have to send you to the surgeon... Any of this sound familiar?

Well, I've got a different approach; it's called "specific" chiropractic. Forget everything you've ever heard about chiropractic before. "Specific" chiropractic is NOT about "popping bones" and "cracking backs." Not even close. We use the most advanced technology in the industry to figure out WHAT is actually causing your symptoms, WHY you feel the way you do and WHERE the problem *really* is. *No guess work*. You can read more about this highly developed equipment by [clicking here](#).

The test is quick, painless and...here's the best part...we will *literally measure* your results before and after every office visit. You heard me; we measure your results on every visit so you and I can see your progress. *No guess work*. This technology also allows me to know **when** to make a correction but, most importantly **when NOT** to make a correction. That's right, we'll be able to follow that old wise saying "if it ain't broke, don't fix it." *No guess work*.

Bottom line, I'm positive that you're tired of being pushed and pulled in all directions at once, getting half answers (if you're getting any at all), and you're tired of *guessing* if you're ever going to get better. I'm also positive that, once it's determined you qualify for care, I will do my absolute best to get you back to doing all the things you used to do before the pain, fatigue, depression, and/or fear robbed you of your life.

To see a list of conditions AND the results (*no guess work*©) other patients have had under "specific" chiropractic

Let's take one more *guess* out of the equation; the one where you *guess* if you come in or not.

CHECK THIS OUT!
